Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 30-32, 37-44, and 46-49, in part, drawn to a method of making a multispecific antibody, wherein the antibody comprises a free-thiol containing residue, classified in class 530, subclass 387.3.
- II. Claims 30-31, 33-45, and 47-49, in part, drawn to a method of making a multispecific antibody, herein the antibody comprises a protuberance into cavity interaction, classified in class 530, subclass 387.3.

The inventions are distinct, each from the other because of the following reasons:

The products of Groups I-II are completely different methods of generating multispecific antibodies, which require different starting materials, different method steps, and produce different products.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

This application contains claims directed to the following patentably distinct species of the claimed invention:

A. If either Group I or II is elected, applicant must further elect from a species of antibody which is made:

A1 - A bispecific antibody is made

A2 - A multispecific antibody, having greater than bispecificity is made

These are distinct structures, having different chemical compositions, and requiring different method steps to generate.

B. If Group II is elected, applicant must further elect a species of larger import residue from those listed in claim 35, and also a species of smaller import residue from those listed in claim 36.

These residues are distinct and will interact different, and thus require different searches and grounds of consideration.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
